

Analyzer Hosted Solution

Introduction

All healthcare providers face a unique set of challenges to ensure the cost effective delivery of services to patients. New facilities and hospitals increase the capability to enhance the patient experience. In today's economic environment, it is essential to make even more efficient use of staff and resources. In particular Trusts need to:

- Maintain financial probity** – containing costs within departmental and specialty budgets
- Improve staff utilisation** – releasing staff from mundane tasks to perform more patient focussed tasks
- Reduce Length of Stay (LOS)** – delivering services more effectively to patients to enable earlier discharge
- Ensure compliance with Government targets** – determine where bottlenecks in pathways and processes may occur and reduce the risk of breaching targets
- Improve clinical outcome** – empower staff to become more patient focused by removing non value-added tasks from processes

The Problem

TCA has now engaged with 40% of acute trusts in England, delivering departmental solutions using the Analyzer Toolset, which focus on the 'impact' that change will have on their operation processes and more

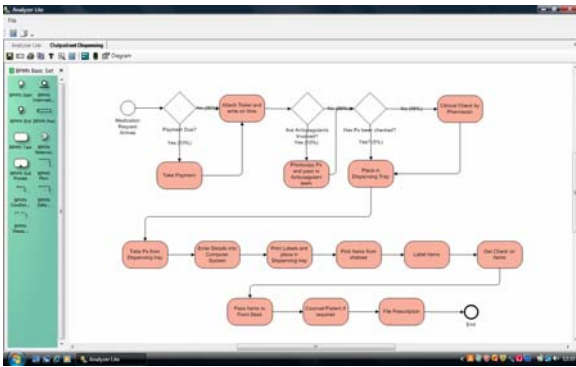

importantly, predicting where cost and staff savings can be made. Our experience has shown that day to day management of the Trust leaves little time to review current care pathways and processes or produce objective business cases on which to base change.

Analyzer Toolset

The Analyzer Toolset is a comprehensive "impact of change" analysis solution. It enables users to compare the cost and resource requirements for current "as is" processes with a range of "what if" scenarios. Through extensive on screen displays and printed reports, the Analyzer Toolset delivers information on which you can make objective decisions for transforming the clinical and business processes of your Trust.

WHY?

- 1, You will **no longer need detailed process modeling skills** within each department
- 2, You do **not need staff availability** or time to model your processes
- 3, You can **access the comprehensive departmental process libraries** with best of breed models
- 4, Agenda for change salary costs are **included** based on mid-point of the pay scale bands
- 5, You can enable **shared access to process models** with colleagues within the Trust
- 6, You do **not require a significant budget available NOW**
- 7, You can quickly and easily **predict ROI and cost savings** with a greater degree of certainty

A New Era

We have listened to what you need to empower change and TC Analyzer is now launching of the next phase of the Analyzer Toolset, the **Analyzer Hosted Service**. This new era in impact of change analysis solutions has been specifically designed to significantly reduce the time it takes to fully model your processes and overcome the problems associated with large scale Software deployment.

What is the Analyzer Hosted Service?

The **Analyzer Hosted Service** is a fully hosted service from TC Analyzer which is accessed using a Virtual Private Network to guarantee security and confidentiality. It enables users to create their own specific folders of process models which can be shared with colleagues if desired. The service prevents loss of data through comprehensive back up of the server databases.

- The service can be accessed from anywhere in the Trust, subject to strict security and confidentiality privileges for each user
- The **Analyzer Hosted Service** allows an **unlimited number** of potential users within your Trust
- You have full access to the departmental process libraries to speed implementation

You are encouraged to join the forums which will enable you to discuss and share best practice in process transformation with other NHS colleagues

Support Services

To ensure that you maximise the benefits of the **Analyzer Hosted Service** we provide a comprehensive range of support services. These include:

- Introductory and Advanced User Training courses
 - Departmental Workshop Sessions to maximize the use of the process libraries
- A full support and maintenance service with access to our help desk

We also have leading healthcare consultancy practices as specialist alliance partners ready and willing to help you achieve the maximum benefit from the **Analyzer Hosted Service**. They are there to help your Trust achieve the success that we

The screenshot shows the TC Analyzer interface with a project tree on the left and a data table on the right. The table has columns for 'Name', 'RM Cost', 'New RM Cost', 'Overheadly Cost', 'Business', 'Cost of Change', and 'Total'. The data is as follows:

Name	RM Cost	New RM Cost	Overheadly Cost	Business	Cost of Change	Total
Pharmacy	28,222.49	28,222.49	0.00	0.00	0.00	28,222.49

have had with other Trusts.
